

Where the paperwork goes

Not onboarding — this is the day-to-day record trail once your fleet is running: every field event an admin has to review, and where it ends up.

ONGOING, EVERY DAY THE FLEET IS IN USE

From a field event to a permanent record

Nothing here is ever hard-deleted — people are deactivated, not removed, so the trail behind every record stays intact.

Worth remembering

- A vehicle scanned out but never scanned back in shows under Records → Open Sessions, where an admin can force-close it.
- Reports and Records both offer a live in-app view as well as CSV export — export is for taking data outside the app, not the only way to see it.
- The Audit Log is read-only by design — it exists to show what admins did, not to be edited.
