

Getting Started Guide

Set up your fleet and get your team on the road

fleet-tracker-liard.vercel.app · October 2026

Welcome

Fleet Tracker lets your team check vehicles in and out with a QR code, so you always know who has which vehicle, how far it has gone, and what is due. Setup takes about 30 minutes and needs one person (your fleet coordinator) to get started.

This guide walks that person through setup, then covers what drivers and admins do day to day. The in-app tour fills in the details the first time each person signs in.

1 Create your organisation

Your organisation is created from a private setup link sent to you by Strongside Creative. Only your fleet coordinator needs it.

1. Open the setup link on your phone or computer.
2. Enter your organisation name, your full name, email and a password.
3. Tap **Create**. You land on the Admin Guide with a confirmation banner.
4. Keep that page open for the next step.

> Your organisation's data is private. No other organisation using Fleet Tracker can see it.

2 Install the app and sign in

Fleet Tracker installs straight from the browser. There is no app store download.

1. Go to fleet-tracker-liard.vercel.app on your phone.
2. **iPhone (Safari):** tap the Share button, then **Add to Home Screen**.
3. **Android (Chrome):** tap the menu (three dots), then **Install app** or **Add to Home screen**.
4. Open Fleet Tracker from your home screen and sign in with the email and password from Step 1.
5. Follow the short tour that starts automatically. You can replay it any time from **Account > Replay Tour**.

> The Admin Guide at /guide/admin has screenshots for each phone type.

3 Add your vehicles and print QR codes

Each vehicle gets its own QR code. Drivers scan it to start and finish trips, so this step must be done before anyone can drive.

1. From the dashboard, tap **Add your first vehicle** (or go to **Vehicles > Add Vehicle**).
2. Enter the name, registration, make, model and current odometer. Add WOF, rego, RUC and service dates if you want reminders.
3. Save. The app opens that vehicle's QR code page.
4. Tap **Print** or **Download**. The code includes the vehicle name and registration.
5. Stick the QR code somewhere easy to reach, such as inside the driver's door or on the key tag.
6. Repeat for each vehicle.

> You can reprint a code any time from the vehicle's page with **View / Print QR Code**.

4 Invite your drivers and admins

Everyone else joins by email invite. You can add several people at once.

1. Go to **People** and choose **Drivers** or **Admins** at the top.
2. Tap **Add**, then enter each person's name and email. Use **+ Add another** for more rows.
3. Tap **Send invites**. Each person gets an email from Fleet Tracker.
4. They tap the link in the email, set a password, then install the app (same as Step 2).
5. Check **People** for anyone marked **Pending**. That means they haven't signed in yet. Tap **Resend invite** if needed.

> Ask people to check their spam folder if the email hasn't arrived within a few minutes.

5 Choose your features and turn on notifications

All features are on by default. Turn off anything your team won't use so the app stays simple.

1. Go to **Account > Features**.
2. Switch on or off: Incident Reports, Vehicle Checks, Reports, Audit Log and Fuel Tracking.
3. On the same page, allow notifications when your phone asks. This lets the app alert you to booking requests, incidents and upcoming WOF, rego or service dates.
4. Rename your organisation here too if needed.

> That's setup done. Your team can start using the app straight away.

Everyday use: drivers

Start a trip

1. Open Fleet Tracker and tap **Scan Vehicle**.
2. Scan the QR code on the vehicle.
3. Check the starting KM (it fills in from the last trip) and add a start location if asked.
4. Tap **Start Trip**. The vehicle now shows on your home screen under **Current Vehicle**.

Finish a trip

1. Scan the same QR code again, or tap the **Current Vehicle** card.
2. Enter the finishing KM from the odometer. If the number looks unusually high or low, the app will ask you to double-check it.
3. Tap **Finish Trip**.

Other things you can do

- **Add fuel:** during a trip, tap **Add Fuel** on the Current Vehicle card. Enter the amount paid and snap the receipt.
- **Book a vehicle:** go to **Bookings > New**, pick the vehicle, date and time, and choose an admin to approve it.
- **Vehicle check:** do a quick walk-around check and add photos of any issues.
- **Report an incident:** record damage, a near miss or an accident, with photos and details.

Everyday use: admins

- **Dashboard:** see KM this week, which vehicles are in use, and alerts for upcoming WOF, rego, RUC or service.
- **Bookings:** approve or decline driver requests. Drivers are notified either way.
- **Records:** every trip, with driver, vehicle, KM and locations. Use **Correct KM** if a driver enters a wrong reading.
- **Incidents & Checks:** review reports and mark them as dealt with.
- **Fuel:** all fuel spend and receipts, with a monthly receipts summary.
- **Reports:** KM and fuel by driver and vehicle for any date range, with CSV export.
- **People:** add, deactivate or remove drivers and admins.

> Admins can also drive. Use **Scan Vehicle** and **My Trips** in the admin menu, the same as a driver.

Tips and help

- Every trip must be finished. A vehicle stays "In Use" until the driver finishes it, or an admin closes it from **Records**.
- Pull down on any screen to refresh it.
- Forgot your password? Tap **Forgot password** on the sign-in screen.
- Removing a vehicle you no longer use keeps its history. It moves to a **Removed** section on the Vehicles page.
- Drivers' written guide: /guide/driver. Admins' guide: /guide/admin.
- For anything else, contact Strongside Creative.
